

## **The ALDEROX® Spray can Delivering advanced products to the construction industry**

### **Why would a company want the Alderox® spray can?**

Currently, companies have few options open to them in resolving small application, non-stick and lubricating issues across their organizations. Alderox® Spray Can enables the consumer to standardize specialty applications where small amounts of lubricating and non-stick formulation is needed to reduce build-up of asphalt, concrete, tar, snow, mud, clay and other materials.

Alderox® Spray Can is a versatile, patented formulation that has been conveniently packaged into a 24 oz. spray can to provide the right amount of product in a thin microfilm to surfaces that are in danger of unwanted build-up. Additionally, the attributes of the product provides excellent lubricating actions.

### **How do most companies resolve stick issues?**

Most companies use a variety of different hydrocarbon based products like diesel fuel as a universal solvent and cleaner. Alderox® Spray can eliminates the need to use harmful and hazardous materials. The convenient package enables the end user to quickly and efficiently apply the correct amount of product to the targeted surface

# Typical Cleaner vs. Alderox® Spray Can

## Standard

*Application Issues* – Brushes, hand held pump sprays and refillable squeeze bottles. Spills, and wasted product due to incorrect application medium contribute to higher costs and poor performance.

*Environmental Issues* – Hydrocarbon based products like diesel fuel are not environmentally friendly and expose personnel to harmful fumes and potential flash fires.

*Stick Issues* – Across your organization material “stick” increases life-cycle costs, and decreases productivity. From the lab to the plant, from the haul trucks to the pavers, rollers and other specialty equipment involved in the asphalt, concrete, and mining industries..

*Supply Issues* – Current solutions are bulky involving multiple products or down-packing hydrocarbon based solutions into small containers. Companies suffer through efficiency losses, higher transaction costs and a lack of standardization

## MS1

*Application Issues* – Alderox® Spray Can applies the correct amount of product in a convenient spray application can enabling the consumer to maximize efficiency.

*Environmental Issues* – Alderox® Spray Can carries the EcoLogoM symbol of environmental excellence. The product is made from renewable resources and contains no hazardous materials, is all natural and contains no hydrocarbons. The EcoLogoM mark is attained through stringent environmental and efficacy testing. Companies applying for the mark, must go through lengthy audits to also ensure that manufacturing is done in accordance with stringent codes and quality control is enforced across the organization.

*Stick Issues* – Alderox® Spray Can solves your organizations “stick” issues while providing a lubricating action to ensure your business continues to run smoothly.

*Supply Issues* – Alderox® Spray Can provides a convenient cost effective solution to minimize waste, standardize application medium and reduce transaction and carrying costs .
