

A L D E R O X[®]

Past problems with most drag chain & slat release industry options:

- Are toxic*
- Leaves asphalt residue on equipment*
 - Resulting in power spikes on start-up and continuing throughout the day
 - Increasing the likelihood of tensile failure, fatigue failure and wear failure
 - High man-hour costs associated with cleaning and maintenance
- Negative effect on asphalt mix caused by release agents/lubricants*
- Require labor time for mixing release solution
- Evaporate at high temperatures*
- Freeze at low temperatures
- Large amounts of product are wasted per application*
- DCR provides a releasing and lubricating action to ensure equipment does not suffer unnecessary down time

**Includes diesel*

Alderox[®] DCR[®] is the only drag chain & slat release agent and lubricant that:

- Is 100% biodegradable**
- Eliminates sticking with all types of asphalt
 - Eliminates resulting power spikes on start-up and throughout the day
 - Removes residue left from other, ineffective release agents
 - Significantly reduces tensile, fatigue and wear
- Does not negatively effect asphalt or equipment
- Ready to use, does not require mixing
- Does not evaporate at high temperatures
- Does not freeze at low temperatures
- Utilizes convenient, advanced filming technology

Alderox[®] DCR[®] drag chain/slat release agent and cleaner has been proven to minimize maintenance, start-up delays, and down-time associated with asphalt handling equipment, delivering results that are unparalleled in the industry.

Breakthrough technology improving efficiencies and results:

- Alderox® DCR® drag chain & slat release agent and cleaner has been applied to various types of equipment in the asphalt industry. Regardless of the type of asphalt and equipment, Alderox® DCR® has been proven to reduce equipment maintenance and energy costs, including reduction in manpower time spent cleaning equipment.

Delivers superior results regardless of type of asphalt mix:

DCR® is extensively used with the following types of asphalt:

- SuperPave
- PG (Performance Grade)
- SMA (Stone Mastic Asphalt)
- SBS (Styrene Butadiene Styrene)
- SBA (Styrene Butadiene Amene)
- Novachip
- OGFC (Open-graded Friction Course)

ALDEROX® DCR® delivers superior results with minimal, if any, asphalt residue remaining on equipment.

Alderox® DCR® – The ultimate drag chain & slat release agent & lubricant

- No other drag release agent or lubricant outperforms ALDEROX® DCR®
